Condition Monitoring Solutions

SensoNODE™ Sensors & Voice of the Machine™ Software
Streamline Your Work with Advanced Condition Monitoring and Diagnostics

Advanced condition monitoring replaces the laborious, time-consuming process of walking from asset to asset, checking manual gauges, taking hand-written notes, and then spending the time to crunch those numbers.

Wirelessly get measurements safely and without interrupting production.
- Identify issues before they escalate
- Reduce downtime
- Decrease maintenance costs

• Avoid dangerous situations
• Make better, more informed decisions
• Improve labor efficiency

When used together, SensoNODE Sensors and Voice of the Machine Software create an advanced condition monitoring solution that delivers vital measurement data and analytics to help drive optimal operational and strategic decisions, leading to maximum uptime.

Route-Based Monitoring vs. Continuous Remote Monitoring

Route-Based Monitoring - No network required (SensoNODE Blue and Mobile App)
- Short-term monitoring when you need it
- Take measurements from individual machines
- Export recorded measurements
- Aids diagnostic efforts
- Wireless solution for on-site monitoring

Continuous Remote Monitoring - Network-based (SensoNODE Gold and Cloud/Edge)
- Long-term and immediate health of machines and processes are viewable around the globe
- Ideal for environments where assets are mission critical, and shutdowns are costly
- User selectable measurement data storage
- Remote solution accessible anywhere, anytime
Parker’s compressed air piping system with condition monitoring. Combines SensoNODE Gold with Cloud to provide continuous monitoring of flow, pressure, current, temperature and humidity.

**SensoNODE™ Sensors**

**SensoNODE Blue** Sensors:
- Pressure
- Temperature
- Humidity
- Strain
- 4-20mA

**SensoNODE Gold** Sensors:
- Pressure
- Temperature
- Humidity
- Current
- Strain
- 4-20mA
- Flow
- Vibration
SensoNODE™ Sensors

Parker’s family of compact energy efficient, wireless sensors for use in a wide range of applications. Designed to eliminate the challenges of traditional monitoring in everyday applications, SensoNODE wireless sensors monitor, and diagnose assets to help predict problems and prevent downtime.

SensoNODE Blue Sensors

Parker’s series of Bluetooth-enabled sensors. Compact, energy-efficient, and wireless, they are designed to provide simple and useful solutions for diagnostic and condition monitoring applications with mobile devices. SensoNODE monitors for changes in asset measurements to help predict problems and prevent downtime.

WHY BLUE?

- Accurate measurements
- Easy installation
- No network and support required
- Mobile access to machines and processes
- Wireless installation removes challenges of wired systems
- No external power source required
- Ultra-low battery consumption for up to five years of battery life
- Sealed sensor housing ideal for harsh environments
- Compact lightweight design
- LED indicators aid in identifying sensor status

SensoNODE Gold Sensors

Parker’s series of networked, wireless sensors that are developed for continuous remote condition monitoring via the cloud or local enterprise applications. That means as long as you have an internet signal, you can get up-to-date measurements.

WHY GOLD?

- Wireless sensors that are small in size
- Simple sensor installation
- Provides accurate measurements
- Place sensors at point of need
- Longer battery life
- Longer range radio
- Durable construction for harsh environments – IP65 Rating
Voice of the Machine™ Software

Parker’s suite of condition monitoring, diagnostics, and analytics software. With an easy-to-use interface and compatibility with multiple browsers and mobile devices, Voice of the Machine puts vital information and analytics in-hand to help keep systems healthy and operating efficiently.

Mobile App

Voice of the Machine SensoNODE Mobile app allows users to receive measurements direct to their mobile devices. The mobile app compiles the data and presents it in a way that makes sense to a user’s operation, allowing them to track data immediately, and receive user-defined alarms for unexpected condition changes. Mapping and dashboard functions allow you to customize data visualization.

WHY MOBILE APP?

- Measurements delivered to your mobile device
- Easy-to-use interface
- Customizable dashboards
- Mapping function
- Set your own alarm thresholds of measurements (min/max)
- Altered when outside of defined thresholds
- User definable sensor naming
- Easy-to-understand trend charts
- Multiple users can access data from their mobile device
- Export data for analysis, sharing, and retention

Voice of the Machine Cloud Software

Parker’s cloud-based continuous condition monitoring interface that provides alerts, status, and analytics for increased awareness of your processes and assets.

WHY CLOUD?

- Access to data anytime, anywhere
- Easy-to-use web-based interface
- No software download – no updates
- Receive alert notifications - email, text message, or in-system
- Visualize data in a way that makes most sense
- Customize alerts, trend charts, and dashboards
- View measurement anomalies easily
- Support continuous improvement efforts with trend data
- Multiple user access levels
- Remotely monitor multiple sites and sensors
- Export and share data

Voice of the Machine Edge Software

The Edge interface is designed to work seamlessly with a web browser-based user interface. Data is ingested from virtually any industrial asset. The software allows you to run various applications utilizing your data at the Edge, or send it securely to the Cloud for seamless enterprise integration.

WHY EDGE?

- App & Industrial Driver Marketplace
- Security Monitoring
- Remote Device Management
- 3rd Party Cloud Integration
- Private Marketplace
- Easy to Use Graphical Programming Interface
- Industrial Device Connectivity
- Application Deployment
- Secure Access
Parker’s IoT-Empowered Solutions

Manufacturing is undergoing a digital revolution centered on new technologies that promise to deliver greater efficiency, speed and higher quality. A central component of this shift is the Internet of Things (IoT), which serves as the frontline of data capture from machines and equipment to ensure operations and companies are moving forward.

Parker’s SensoNODE™ Sensors and Voice of the Machine™ Software are IoT-empowered solutions that create advanced condition monitoring possibilities to reduce downtime and decrease maintenance costs, helping you to maintain production and improve efficiency.

Voice of the Machine powers Parker’s IoT solutions and ensures data is being generated on dozens of critical parameters of your operation. With Voice of the Machine, you’re assured of component-level IoT that is interoperable, secure, scalable and easy-to-use.

- Reduce your risk, maintenance costs and unplanned downtime
- Uncover operational and performance improvements
- Make smarter, more confident decisions and enjoy greater peace of mind
- Leverage Parker’s expertise to employ easy, cost-effective strategies
