

Pressure Relief Valves for SCBA Air Packs

Overpressure Protection for your SCBA Air Pack

Parker's Pressure Relief Valve makes it easy to maintain pressure to safely prevent over-pressurization and supports downstream equipment protection on the self-contained breathing apparatus (SCBA). Constructed of stainless steel, the pressure relief valve can withstand the most extreme temperature conditions ranging from -25° F to 160° F. It features fast installation and replacement.

Our Pressure Relief Valves are highly customizable to exact specifications required on SCBA gear and ensures accuracy during operations. The design is tamper-proof to ensure the pressure settings remain unchanged while in use and stay true to the manufactured product specifications. In addition, the pressure relief valve is in full compliance with National Fire Protection Association (NFPA) standards.

Overpressure Protection Pressure Relief Valve Features:

- Robust, tamper-proof valve design
- Improved system process and accuracy
- Pressure rated at 2,216, 3,000, 4,500 & 5,500 PSI
- Rugged and durable
- Made in the USA
